

Porsche 997 EVT700 during Intelligent Tuning

Intelligent Tuning... Insanely Tuned!

More than words; this is the SOUL of Evolution MotorSports. With each new generation of technology, this core essence of our existence is what differentiates us from the competition. In 2001, we began the "Insanely Tuned" revolution with our over the top, high horsepower 996 twin turbos, which dominated the industry. Our perseverance and core beliefs have been substantiated with many coveted awards and current standing world records. Our vast performance innovations have set the industry standard and are currently used as the benchmark for many companies and consumers alike. While "they" try to catch up and replicate or duplicate our technologies, we have surpassed our own advancements while raising the bar even higher. Once you experience this elevated level of mind bending performance, it is a virus in the blood.

EVOMS*it* - INTELLIGENT TUNING: GERMAN ENGINEERING, MADE IN AMERICA

A Performance System with EVOMS "Intelligent Tuning" begins inside the Engine Control Unit (ECU) "brain" of the vehicle. EVOMS - Intelligent Tuning, (EVOMS*it*) combines a superior mechanical expertise with an unequivocal capacity to calibrate the most complex automotive computer electronics in today's vehicles. When you experience the thrill of EVOMS*it* software installed into your automobile, you will begin to realize our world of intelligent tuning, insanely tuned. Our stringent testing assures pure, crisp and consistent power in all of the conditions you like to enjoy your vehicle. Most software upgrades on the market have either never been tested or these companies spend precious time developing useless options that do not belong on a high performance vehicle. We spend 100% of our R&D efforts on the development and testing of performance software, period. Our painstaking attention to details combined with our meticulous calibrating procedures clearly set us apart in the world of software development.

GERMAN ENGINEERING, MADE IN THE U.S.A.

Evolution MotorSports is world renowned and owns one of the finest aftermarket Autoteknik facilities in the USA. Our impeccable tuning center is the home to our design, engineering, manufacturing, testing and distribution. Our purpose built, state of the art all wheel drive Mustang Dynamometer cell with data acquisition equipment and wind tunnel cooling/ventilation system is second to none. Our tuning equipment, combined with our methodical testing procedures and our comprehensive knowledge allows us to test and tune with the most accurate results and feedback from the vehicle. All of our equipment and the entire dyno testing process have been developed and perfected over the past 10 years.

The EVOMSit software engineering team consists of a worldwide network of the most qualified and highly respected members of an elite tuning

community. In Arizona, at EVOMS headquarters, the team is responsible for the research, development and testing where founder and President Todd Zuccone is in charge of the software calibrations and ECU tuning. Mr. Zuccone works directly with Senior Technician / Porsche specialist and engine builder John Bray. The combination of these two powerful,

mechanical and meticulous minds are responsible for deciphering and understanding the "brain" of the cars, translating the information and making the necessary changes to allow all of the engine systems and software calibrations to work together in perfect synchronicity.

Own It, Race It!

Owning the vehicles we design products for is a key component to the success of EVOMS. In order to engineer and test specific products and ultimately complete Performance Systems, EVOMS acquires the vehicle and drives them as enthusiasts do (OK, perhaps a bit harder than most). This is not the industry standard. Our development vehicles undergo a massive transformation during the R&D process. Each vehicle is continuously evaluated and tested through each phase of "evolution" to ensure optimum performance and reliability. Each vehicle we own/owned, have set the benchmark for the entire industry.

Audi R8 during Intelligent Tuning

INTELLIGENT IST & SP FUNCTIONS

SP (Sport Pedal™): All E-Gas (drive by wire) cars from model year 2000 and newer have an electronic throttle valve, which is controlled by the ECU. The EVOMSit Sport Pedal™ (SP) feature changes the ratio of accelerator pedal movement versus opening of the throttle valve increasing throttle response. By modifying these maps in the ECU calibration, throttle response is drastically improved and the "throttle delay" is virtually eliminated.

EVOMS Porsche 997 with EVT700 Performance System during track testing at Firebird Raceway Phoenix Arizona

IST (Integrated Switching Technology™): The Intelligent Tuning of EVOMSit software automatically adjusts for different octane levels of fuel, altitude and other atmospheric conditions the car will encounter. IST is an OEM feature built into the factory ECU allowing automatic switching of ignition timing maps based upon input received from other engine sensors. We incorporate multiple OEM ignition tables that are progressively staged to our performance specifications, which automatically optimize safe performance based upon outside conditions and different octane fuels. The ECU automatically switches to the best-suited ignition map creating an automatic "race mode" if race fuel is utilized. This IST function is always active and will switch automatically without having to make any physical changes while maintaining optimum performance.

Decision Time!

The Evolution MotorSports painstaking attention to details combined with our meticulous calibrating procedures clearly set us apart in the world of software development. We believe in our product and prove it with the best warranty in the industry:

- ▶ 45 Day Money Back Guarantee
- ▶ 1 Year Power Guarantee
- ▶ 5 Year Free Performance Updates
- ▶ 10 Year Product Warranty

EVOMSi^{it} performance software clearly represents the apex of technology where pure adrenaline is fused with ULTIMATE PERFORMANCE!

EVOMS EVT700 ready to launch at Texas Mile!

The EVOMS Team & The Gumpert Apollo!

EVOLUTION MOTORSPORTS

Driving a performance car and driving an intelligently tuned performance automobile are very demanding and contrasting dynamics. The first can easily be accomplished by driving a new Porsche 997 turbo out of the dealer showroom and living happily with regular maintenance and a cup of coffee at the dealer. The second requires Evolution MotorSports (EVOMS) in Tempe, Arizona in the USA, where intelligent tuning and Insanely Tuned converge!

EVOMS specializes in building Performance Systems and Supercars that maintain creature comforts for street driving while setting scorching times on race days, charging through the canyons, or enjoying those long drives on wide open freeways to the next "Cars & Coffee". Porsche, Lamborghini, Ferrari, Bentley, Mercedes, Gumpert, and many other marques start their transformation with these 5 memorable letters: E-V-O-M-S!

ESTABLISHED - 1997

Since 1997, EVOMS founder, Todd Zuccone, and his team of fanatical designers have been engineering and crafting Performance Systems that have fueled an industry. Mr. Zuccone was born into a "Porsche" family and spent his early years at the race track where he was modifying and driving Porsche 911's at the age of 12. This fueled his passion and set in motion his lifetime dedication and experience with Porsche. Read on to learn more about what makes Evolution MotorSports a true leader in aftermarket Porsche performance.

Mr. Gumpert & Mr. Zuccone

INDUSTRY LEADERS

Evolution MotorSports has been a recognized leader in the aftermarket performance industry for over a decade. More recently, in 2008, Evolution MotorSports was selected by Mr. Roland Gumpert, founder of Gumpert Sportswagenmanufaktur GmbH, as the U.S. final assembly and Performance Validation Center for the world renowned Gumpert Apollo. The Gumpert team selected Evolution MotorSports for their exceptional technical background, unparalleled facility and their commitment to perfection. This type of affiliation doesn't come by accident, but driven by a passion for excellence and an annoying obsession with fine details. This is Evolution MotorSports.

EVOMS = WINNING PERFORMANCE

Performance-Engineered is the foundation behind developing our impeccable bloodline of upgrade components. Thousands of hours of advanced CAD design engineering, prototyping, virtual testing, and real world product validation are invested in our products ensuring the most efficient and powerful designs, fused with function and reliability. Our upgrades and performance systems are designed to meet or exceed the quality of OEM components and provide pure exhilarated performance for today, tomorrow and years to come. EVOMS products represent the next level of performance that other aftermarket companies can only dream about creating.
